Environmental Policy

Zitac Consulting AB shall work to minimize its own and customers' environmental impact as far as it is ecologically justified, technically possible and economically reasonable.

This is done by:

Conducting an environmental review where we have identified three factors that foremost have an impact. These are electricity consumption, transportation, and electronic waste.

- Through efficient planning and collaboration with customers, Zitac Consulting AB will reduce the environmental impact of our transports.
- Zitac Consulting AB shall consider relevant environmental aspects for each individual purchase of products and services.
- Maintain knowledge of the environmental impact of our operations and monitor progress to reduce it. This is to increase our knowledge and commitment to environmental issues that affect us and our customers' products to protect the environment.
- The Environmental adaptation must be an ongoing process in every part of the business, both at the office and in the work we perform at our customers sites, and lead to a continuous improvement such as the travel reduction between our offices.
- Have an ongoing dialogue with customers, authorities, and suppliers about future environmentally friendly alternatives.
- Work with waste management, choose environmentally friendly packaging materials and prevent pollution as far as possible.
- Identify, interpret, and comply with the environmental laws and other environmental requirements that affect our business.

Our environmental work must be constantly improved with the help of continuously revised goals and action programs.

This environmental policy must be reconsidered each time a new environmental assessment is made.

Jesper Mathiasson, CEO
